

I. Constructions.

1. Construct the midsegment of $\triangle ABC$ which is parallel to \overline{AB} . Measure!

2. Construct the midsegment of $\triangle DEF$ which is equal to half the measure of \overline{DE} .

II. Find the value of the variables in each triangle. SHOW YOUR WORK.

3. *even sided*

$4z = 48$
 $z = 12$

$2(54) = 3x$
 $\frac{108}{3} = \frac{3x}{3}$
 $x = 36$

4. *corresponding*

$2(5x) = 8x + 10$
 $10x = 8x + 10$
 $2x = 10$
 $x = 5$

5.

$\Delta = 180$
 $180 - 32 - 92 =$
 $2(5x-3) = x^2 + 5x$
 $10x - 6 = x^2 + 5x$
 $0 = x^2 - 5x + 6$
 $(x-3)(x-2)$
 $x=3$ $x=2$

III. \overline{CG} , \overline{EH} , and \overline{FJ} are midsegments of $\triangle ABD$, $\triangle GCD$, and $\triangle GHE$, respectively. Find each measure.

6. CG	16.5	7. EH	11
8. FJ	GF = 8.25 4.13	9. $m\angle DCG$	57° (corresponding angles)
10. $m\angle GHE$	57°	11. $m\angle FJH$	180 - 57 123°

IV. $\triangle KLM$ is the midsegment triangle of $\triangle GHJ$.

$GH = 12$

12. What is the perimeter of $\triangle GHJ$?

34

13. What is the perimeter of $\triangle KLM$?

17

14. What is the relationship between the perimeter of $\triangle GHJ$ and the perimeter of $\triangle KLM$?

The perimeter of $\triangle KLM$ is one half the perimeter of $\triangle GHJ$

V. Coordinate Geometry.

15. Graph $\triangle ABC$, given $A(-5, -5)$, $B(-3, 5)$, and $C(7, -1)$.

16. Find and graph point D , the midpoint of \overline{AB} . Find and graph point E , the midpoint of \overline{BC} . Then draw in \overline{DE} .

$$\frac{-5-3}{2}, \frac{-5+5}{2} \quad \frac{-3+7}{2}, \frac{5-1}{2}$$

$D(-4, 0)$ and $E(2, 2)$

17. \overline{DE} is also known as a midsegment of $\triangle ABC$.

18. What properties are true of a triangle's midsegment?

19. Find m_{DE} .

$$\sqrt{(-4-2)^2 + (0-2)^2} = \sqrt{-6^2 + -2^2} = \sqrt{36+4} = \sqrt{40}$$

$m_{DE} = \approx 6.3$

20. Without actually finding it, what would be m_{AC} ? How do you know this?

$m_{AC} = 12.6$ because... its twice of the midsegment

21. Find the equation of the line containing \overline{DE} in standard form.

$(-4, 0)$ $(2, 2)$ $\frac{2-0}{2-(-4)} = \frac{2}{6} = 1/3$ slope intercept

$y = 1/3 x + 1.3$

22. Find \overline{DE} . (simplified radical form)

$\sqrt{40} = 2\sqrt{10}$

$DE = 2\sqrt{10}$

23. Without actually finding it, what would be AC ? How do you know this?

$AC = 4\sqrt{10}$ because... its twice of DE
